

Installation Dashboard

Install & Update Guide

Installation System · Version 1.0.0 · August 2026

The Installation Dashboard replaces the installation scheduling spreadsheet. Customer details, payment status, panel and inverter specs, addresses and SEDA status come across automatically from the sales system — you do not type any of that in. What you record here is the operational side: installation dates, customer confirmation, teams, stock and delivery.

It installs like a normal Windows program. There is no website to log into and no link to remember.

PART 1

Part 1 — Installing

Set aside about 5 minutes. You need a Windows PC (Windows 10 or 11) and an internet connection. There is nothing to install beforehand — the app brings everything it needs with it.

Step 1 — Download

Go to the [Installation System download page](#), scroll down to the **Assets** list, and click the file named:

Installation-System-Setup-1.0.0.exe

It will go to your **Downloads** folder unless you choose somewhere else.

Step 2 — Install

Double-click the file you just downloaded.

You will see a blue warning screen. This is normal.

Windows shows “**Windows protected your PC**” because this is an internal company app and not something sold in a shop. It does not mean the file is unsafe.

Click **More info**, then click **Run anyway**. If you do not see “Run anyway”, make sure you clicked **More info** first.

Click **Next** through the screens, tick **Create a desktop shortcut** if you would like one, then click **Install**. When it is done you will have an **Installation System** shortcut on your desktop and in the Start Menu.

Step 3 — Open it for the first time

Double-click the desktop shortcut. The first time you open it, the window may stay blank or white for a few seconds while it starts up. This is normal and only happens on the first launch — later launches are faster.

You should then see the dashboard, with today's date and **Malaysia time** at the top. There are no keys to paste in and no login to create. **You are done.**

CHECK THIS EVERY TIME

Step 4 — Check you are seeing real customers

Do this every time you open the app. It takes two seconds. Look at the connection dot in the top right of the screen, and at the customer names below it.

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
Live source and names you recognise	Connected. Everything is fine.	Carry on working
Demo source , or DEMO CUSTOMER ONE / TWO / THREE	Not connected. These are fake examples.	Stop. See below.

If you see the DEMO CUSTOMER names

The app cannot reach the database, and there will be a warning message across the top of the screen.

Anything you type while in this state will not be saved. Close the app, check your internet connection, and open it again. If the demo names are still there, contact Nurul — do not carry on working.

THE FOUR TABS

Finding your way around

Active pipeline

Your main working screen — every customer who is ready for installation, one row each. Customers appear here automatically once they reach **59% payment**. You do not add them yourself. Click any customer row to open their full record.

- **All active jobs** — everything currently in progress
- **New / ready to schedule** — customers who have just arrived and need a date
- **Needs attention** — jobs with something blocking them
- **All states** — filter by state (Johor, Selangor and so on)

Team planning

Where you plan which customers to install together. The app suggests groups of nearby customers based on township — for example all the Mount Austin jobs together. You choose a planning range, review the suggestion, and confirm it before anything is created. **Nothing is grouped automatically without you agreeing to it.**

A group holds a maximum of five customers per day. You can also add any customer manually through the search box if the suggestion missed them. Customers who tell you they are not available are moved to a **Customer unavailable** list and their slot is freed for someone else; they come back to planning once they confirm a new date.

Installation groups

Your installation groups and the team directory. A group is one day's work in one area — it has a date, an area, an installation team, a wiring team and a supervisor. Change the group's date or team here and **every customer in that group updates automatically**. You do not need to edit each customer one by one.

The team directory is on this screen too. Add teams, their members, contact numbers and base location, and set which township each team is working in for the week.

Stock delivery

Delivery runs — a van going out on a date, to an area, from a warehouse. Set the run's date, warehouse, driver (PIC) and contact, and link customer groups to it. Track each delivery from pending stock, to in transit, to delivered.

INSIDE A JOB

Understanding a customer record

Click any customer in the Active pipeline to open their record. At the top you will see five checks:

CHECK	GREEN WHEN	WHAT IT TELLS YOU
Payment	59% or above	Customer has paid enough to install
SEDA	Approved	SEDA approval has come through
Stock	Delivered	Materials have arrived
Date	A date is set	Installation date is arranged
Teams	At least one assigned	Someone is booked to do the work

A job is only truly **Ready to install** when all five are satisfied. If a job is not ready, these five checks tell you exactly which one is holding it up — so you never have to guess.

Inside the record you can set the installation date, record whether the customer confirmed, add remarks, enter stock details, and assign teams. **Team assignments** take as many rows as you need; each row has a role (Roof / panel, Wiring / electrical, Battery / inverter, or Site supervisor) and an activity:

- Hooks and rails structure at roof
- PV panel installation work
- DC & AC cable trunking / casing / conduit works
- Earthing cable mounted to PV structure
- Other (you type the description)

The SLD drawing opens inside the record — you can view it on screen, no need to go looking for the file separately.

PART 2

Part 2 — Updating

Short version: you don't have to do anything. The app checks for new versions by itself and tells you when one is ready.

When an update is ready

An **Install Update** button appears in the **top bar**, next to *Check for new jobs*, showing the new version number.

- 1 Click **Install Update**.
- 2 Wait. The button shows the download progress, then the app closes and reopens by itself on the new version. This takes a minute or two.
- 3 **Do not close the window while it is working.**

Things worth knowing

Nothing of yours is lost. All your data lives in the shared database — an update only replaces the program itself.

You never download the installer again. Steps 1–3 above are one time only.

If an update fails, the app keeps working on the current version. Tell Nurul so it can be looked into.

COMMON QUESTIONS

Common questions

QUESTION	ANSWER
Do I need to save?	Your changes go to the shared database when you save the record. Watch for the confirmation message. If you are not sure a change went through, close the record and open it again to check.
Will my colleague see my updates?	Yes. The app runs on your PC, but everyone shares the same database. If two of you have it open, you are working on the same jobs. Refresh to see each other's latest changes.
A customer is missing.	Check your filter first — you may be on New / ready to schedule rather than All active jobs . If they are genuinely missing, tell Nurul; do not add them manually somewhere else.
A customer paid but is not showing.	Customers appear at 59% payment. Below that they need management approval as a special case.
Can I use it at home / on site?	Yes, as long as you have internet. It does not need to be on the office network.

TROUBLESHOOTING

If something goes wrong

WHAT YOU SEE	WHAT TO DO
Blue “Windows protected your PC” screen	Normal. Click More info → Run anyway
Window is blank or white	Wait 10 seconds. If still blank, close it completely and reopen
Seeing DEMO CUSTOMER names	Not connected. Check internet, reopen. Do not enter any data
Warning bar across the top	Read it — it explains what is not working
App will not start at all	Restart your PC, then try again
An update failed	Tell Nurul — the app keeps working on the current version
Anything else	Contact Nurul. Say what you were doing and what you saw

Please report problems rather than working around them.

In these early weeks, issues get fixed quickly — but only if someone says something. If you find yourself going back to Excel to get something done, that is exactly the thing worth reporting.

Nurul — for anything about the app: problems, questions, missing customers, or suggestions for what would make it easier to use.

This is version 1.0.0. Nothing is stored on your PC — all data lives in the shared database, so there is nothing to back up and nothing lost if your PC is replaced. To uninstall: Settings → Apps → Installation System → Uninstall.
